VENDOR'S TRAY SYSTEM FOR THE G2 WITH KEYBOARD
G2_4 POINT CARRIER

Hands-free working remains possible with the keyboard on the TOUGHBOOK G2, as it is carried like a belly tray using a 4-point carrying system.
For this purpose, two fixing lugs are firmly screwed to the rear corners of the keyboard unit. Two more are attached to hand clamps that can be easily slid onto the front corners of the keyboard.
The actual locking mechanism is created solely by the weight of the computer itself. When the weight is relieved, the two hand clamps can then be removed just as easily and the device can then be inserted into a docking station.

FUNCTION
Hands free when using the keyboard unit on the TOUGHBOOK G2

FACTS
Hand clamps
- Fix themselves by the net weight of the computer
- Are easily removable when weight is relieved. This ensures that the computer can be closed and placed in the docking station.

FEATURES
- Easy allocation of the hand clamps thanks to left-right marking.

USEABLE WITH PWA SOLUTIONS
- PWA_G2_RPH (REAR PEN HOLDER)
- PWA_G2_PeHo_B (PEN HOLDER)
- PWA_G2_lrBT (LONG RANGE BLUETOOTH RADIO)
